(54) ATOMIZING DEVICE

(57)Abstract:

PURPOSE: To provide an atomizing device which has a wide variable range of the atomized amount and atomized liquid to ultra-fine particles.

CONSTITUTION: Liquid is supplied to a liquid nozzle 9 having a spray hole 12 by a pump 11. A rotor 13 installed inside the nozzle 9 is rotated by a motor 16. Therefore, when liquid is forcibly supplied to the liquid nozzle 9 by the pump 11 to rotate the rotor 13, the liquid is jetted from the spray hole 12 while swirling in a hollow reverse cone to drive and atomize the liquid film by the jet velocity and the relative velocity difference between the swirling velocity and the surrounding.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of
rejection]

[Kind of final disposal of application other than
the examiner's decision of rejection or
application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
